

Deliverable 3 — Interface & View Binding

Weight: 30% · Due: end of Week 8 · Phase 3 (AI ON)

Purpose

Deliver a **fully interactive local application** where CRUD operates seamlessly — real views built from components, forms bound to the Phase 2 controllers, and graceful handling of loading, success, and every kind of failure. This deliverable spans Weeks 6–8 and closes Phase 3. **AI was a required tool; its use must be disclosed.**

What to submit

Team Artifact

1. **Views for every screen and state** — index/list, detail, create, edit, plus empty, loading, and error states, built from reusable components.
2. **Forms bound to the backend** — Create and Update send data asynchronously to your Phase 2 controllers; records persist; the UI updates without a full reload.
3. **Complete feedback handling** — every async action has a loading state; every failure category (422 / 404 / 500 / network) is handled and **visible**; success is confirmed.
4. **Consistent, helpful messaging** — errors are specific, human, and in the app's voice; no raw status codes or stack traces reach the user.

Individual Artifact (per student)

- **Verifiable Git commits** connecting the student's assigned screens/components and form bindings.
- Contribution visible on the board (owned tickets) and in commit history.

AI Artifact (mandatory this phase)

- A **prompt log** in `/docs/ai-notes/` recording the key prompts used across Weeks 6–8, with each component/binding marked **AI-generated**, **AI-modified**, or **hand-written**.

Submission format

- **Repo:** a running local app where all CRUD works end to end; documented run instructions in the README.
- **Docs:** `/docs/components.md`, `/docs/feedback-matrix.md`, and the prompt log present.
- **Board:** every member owns screens/bindings; all merges via reviewed PR (branch protection respected).

Grading rubric (50 Team / 50 Individual)

Team (50 pts) | Criteria | Pts | |---|---| | CRUD works end to end in the running app | 14 | | Every screen **and state** built (incl. empty / loading / error) | 10 | | Forms bound to controllers; async submit; records persist | 10 | | All failure categories handled and visible (422 / 404 / 500 / network) | 10 | | Feedback is consistent and messages are helpful & human | 6 |

Individual (50 pts) | Criteria | Pts | |---|---| | Verifiable commits: student's assigned screens/components & bindings | 22 | | Prompt log present and honest for the student's work | 13 | | Meaningful share of the feedback/error handling | 10 | | Contribution corroborated (board ownership + commits align) | 5 |

No-evidence rule: a student with no owned screens/bindings and no committed contribution receives **0** on the individual half, regardless of team score. **Disclosure rule:** undisclosed AI use (missing or dishonest prompt log) is an integrity violation, not a style deduction.

Definition of Done

- ☐ Create, read, update, and delete all work end to end in the running app
- ☐ Every screen and state exists (list, detail, create, edit, empty, loading, error)
- ☐ Create/Update forms bound async to the Phase 2 controllers; records persist
- ☐ Loading shown on every async action; controls disabled while pending
- ☐ 422 (inline), 404, and 500/network failures all handled and visible

- ❑ Messages are specific, human, consistent; no leaked internals
 - ❑ Prompt log present with AI/hand-written labels
 - ❑ Every member owns work; all merges via reviewed PR
-

Common ways teams lose points

- **Silent failures** — a broken request that shows the user nothing.
- **Happy path only** — success handled, the 422/404/500/network branches ignored.
- **Missing states** — no empty state, no loading indicator (the blank-screen problem).
- **Leaked internals** — "Error 422" or a stack trace shown to the user.
- **Inconsistency** — create gives feedback, edit doesn't.
- **Missing or dishonest prompt log** — AI use undisclosed.
